Here's Eidi Obiero, who is 23 years old and recently graduated from the University of Kenya in Computer Engineering. At an early age, she was known to be a neat-freak among her friends and family. Not only did she have a super neat and tidy room, she also managed her time with a daily routine including a balance between exercise, and academics.

When Eidi was in her graduating year, she came up with a startup that aims to improve how Kenyans travel around the country through magnetic rail technology. While she has some software and financial skills to develop this idea, she will need funding to hire other engineers, designers, accountants, and managers, as well as tools that will aid Eidi in making her idea a reality.

Since this will be Eidi's first ever startup, she will need guidance on how to manage her startup, preferably from someone who has expertise leading a successful startup into a full fledged company. She hopes to also learn with other entrepreneurs who are also trying to start up their own company in Africa in a classroom-like setting.

Meet Harold Silvia, a 65 year old as the founder of Spacebook. His life began in the rural valleys in Eastern Europe, and lived in a low income household through most of his childhood. When he was 16, he became a fast food worker, and slowly rose up the ranks to become the store associate for the restaurant. Mr. Silvia knew at that time that he wanted to go into management, and so with the money he saved and the experience he had managing a restaurant, Mr. Silvia pursued a Bachelor of Business Administration at his local university, which led him to where he is today.

As Mr. Silvia reaches retirement, he hopes to someday spread the knowledge he attained from his career to all promising entrepreneurs. One attribute he would like when he runs his class is to make it accessible to all, regardless of location, language and disability. He also hopes that unlike most classes online, he will be able to interact with his students, and will be able to communicate with those learning from him. Mr. Silvia is a believer in learning by doing, not watching, so he also hopes to design case studies that will aid students in practicing what they've been taught.

Despite Mr. Silvia's strong interest in teaching, he has never attended a Teacher's college, or has never taken any courses in education. He has never organized a class for students, and doesn't know how he should teach and interact with his students in a way that will help them better learn the material.

Rahul Sharma just turned 30, and so far he's pretty content with his life as an investment broker at Riche. In his teens, he was always asking himself, "How can I make more money out of this?". It started small, where he would buy things from stores with discounts or coupons, and diversifying his assets from his savings accounts, to doing his BBA at the University of Toronto, Mississauga Campus, and his MBA from Queen's University to become an investment broker.

Recently, there has been a surge of tech startups, and Mr. Sharma has been putting a lot of his investments in these companies. Most of the time, he will turn a profit despite the minor hiccups these companies would face; sometimes, he will lose money in companies that close down. As an investor, he'd prefer not to make these losses, and would do a background check on each startup to ensure that he will make a positive return. He hopes that all the company information needed to decide whether to invest can be centralized, to save him time.

While Rahul wants to rake in more profits from startups, he also would like to promote his investment firm Riche. He hopes that one day, Riche will be just as well known as the other finance companies like JPMorgan and Goldman Sachs.
